New human structural and cytoskeleton-associated proteins and polynucleotides for diagnosing, preventing or treating diseases associated with aberrant protein expression, e.g. cancer, atherosclerosis, HIV or stroke

Claim 1; Page 150-152; 205pp; English.

The present sequence represents a structural and cytoskeleton-associated polypeptide (SCAP). The SCAP polypeptides and polynucleotides of the invention are useful for diagnosing, preventing or treating diseases or conditions associated with aberrant expression of SCAP, such as cell

```
7,
                        infections (e.g. HIV) or neurological disorders (e.g. Parkinson's disease, Alzheimer's disease or stroke). These may also be used for assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of SCAP. The SCAP or its fragments are also useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    94 YGERSTQQDIYAGSVQPILRHILEGQNASVLAYGPTGAGKTHTMLGSPEQPGVIPRALMD 153

(1). (1) is useful for screening andulators of Hakipad. The method concentration, and assaying for the level of Hakipad activity, where the concentration, and assaying for the level of Hakipad activity, where the Hakipad activity is from binding activity or Arpase activity, where the change in activity between the test and control concentration indicates a modulator. A composition containing (1) is useful in the treatment of inflammation, cardiac hypertrophy, cellular proliferation diseases e.g. hyperplasias, restenosis, cancer, including solid tumours of skin, bream, lung, heart, bone, genitourinary tract, liver, nervous system, adrenal glands, haematologic, gynaecological and testicular carcinomas, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease, proliferation induced after medical procedures, such as surgery, angioplasty. The motor domains may also be used in nanotechnological applications, and polymucleotides encoding the proteins is further useful for inclusion on GeneChip (RTW) array or for use in expression monitoring. This is the amino acid sequence of the novel human contor protein Hakipad motor domain, described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel microtubule motor protein for screening modulators of HsKip3d, useful in treatment of hyperproliferative disease e.g. cancer, autoimmune disease, arthritis, graft rejection, inflammatory bowel disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          143

PIR\_79:\* 1: pir1:\* 2: pir2:\* 3: pir3:\* 4: pir4:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T48258 Kinesin-like protein - Arabidopsis thaliana N,Alternate names: protein T1E22.130

```
Kinesin-related protein KLP68D - fruit fly (Drosophila melanogaster)

NyAlternate names: kinesin-like protein 5; KLP5
C; Species: Drosophila melanogaster
C; Date: 23-Mar-1995 #sequence_revision 23-Mar-1995 #text_change 09-Jul-2004
C; Accession: A55236; E41298
R; Pesavento, P.A.; Stewart, R.J.; Goldstein, L.S.B.
J. Cell Biol. 127, 1041-1048, 1994
A; Title: Characterization of the KuP68D kinesin-like protein in Drosophila: possible rol
A; Reference number: A55236; MUD: 95050960; PMID: 7525600

systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP to phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a

human; enzyme; motor domain; kinesin-like DNA binding protein; KID; cytostetic; cardiant; immunomodilator; antlinflammatory; gene therapy; cancer; hyperplasia; restenosis; cellular proliferation disorder; cardiac hypertrophy; immune disorder; inflammation. This invention relates to a novel method for high throughput screening Identifying a candidate agent as modulator of function of a target protein for treating cellular proliferation disorders by adding a candidate agent to a mixture of the target protein that directly/indirectly produces ADP or phosphate. Human kinesin-like DNA binding protein (KID) (SeqID 6). Claim 1, SEQ ID NO 6, 26pp; English. ADC23342 standard; protein; 346 AA. 28-NOV-2000; 2000US-00724224. 20-APR-1999; 99US-00295612. 20-JUN-2000; 2000US-00597292. (first entry) (CYTO-) CYTOKINETICS INC. WPI; 2003-706919/67. kinesin-like DNÀ binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatement of cancer, hyperplasias, restenosis, cardiac hypertraphy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 6) of the invention.
                                                                                                                                                                                                    9
                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; microtubule motor protein; cellular proliferation disorder; acnocr; hyperplasia; restenosis; cardiac hypertrophy; immune disorder; inflammation; kinesin-like DMA binding protein; KID; autoimmune disease; arthritis; graft rejection; inflammatory bowel disease; angloplasty.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening corformidated Arpase activity, a method of testing for Arpase activity of microtubule estimulated Arpase activity, a method of testing for Arpase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating autoimmune proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                             This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 8) of the invention.

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for Muduators of a motor protein which has microtubule stimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for correcting for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune disorders and inflammation, for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and profession associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and consideration induced after medical procedures and co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GVIPRALMDLLQLTREEGAEGRPWALSVTWSYLEIYQEKVLDLLDPASGDLVIREDCRGN 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modularing the activity of target proteins having motor or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cyrostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 2) of the invention.

contivity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target.

Control or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA chinding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune associated with KID and for inhibiting KID and for treating autoimmune confiseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein of the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:1, but this does not

The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and conditions to (a) and conditions to (b) the conditions to (b) and conditions to (c) is a complement of (d). The nucleic acid molecules, configurably cancers in munune-related diseases or disorders, cardiovascular disease, brain or neuronal-associated diseases, and metabolic disorders. The disorders are conversably cancers of the tissues or of hematopoietic origin, diseases of the central or peripheral nervous system, Alzheimer's disease, pain, conversing tiffections caused by prions, infections caused by prions, infections caused by fungi, ocular diseases, migraines, pain, causorders, hypotension, mood disorders, attention disorders, pain, causorders, hypotension, hypertension, psychotic disorders, neurological cisorders, dyskinesias, metabolic disorders and organ transplant rejection. This sequence corresponds to one of the kinase polypeptides of the invention.
                                                                                                                                                                                                                                                                                                      New isolated, enriched or purified nucleic acid molecule encoding a kinase polypeptide, useful for treating cancer, immune-related diseases, cardiovascular disease, brain or neuronal-associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                        Claim 1; SEQ ID NO 80; 491pp; English.

Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulaicors and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasis, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polypeptide sequence is human KID protein (SeqID 4) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                  human; enzyme; motor domain; kinesin-like DNA binding protein; KID; cytostatic; cardiant; immunomodulator; antiinflammatory; gene therapy; cancer; hyperplasia; restenosis; cellular proliferation disorder; cardiac hypertrophy; immune disorder; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying a candidate agent as modulator of function of a targ protein for treating cellular proliferation disorders by adding candidate agent to a mixture of the target protein that directly/indirectly produces ADP or phosphate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 99.7%; Score 1763; DB 7; Length 512; 100.0%; Pred. ```
The invention relates to human microtubble motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ATPase activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, modulators of the target protein, modulators of the target concer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for careening for modulators of motor proteins useful for treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac proliferation disorders and inflammation, for treating disorders hypertrophy, immune disorders and inflammation, for treating disorders

associated with KID and for inhibiting KID and for treating autoimmune diseases, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and angioplasty. This sequence represents a human microtubule motor protein of the invention. Note: The specification states that this sequence is encoded by the nucleic acid featured as SEQ ID NO:3, but this does not appear to be the case.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    THAP responsive element; angiogenesis; inflammation; metastasis; cancer; apoptosis; cardiovascular disease; neurodegenerative disease; chemokine; antiangiogenic; antiinflammatory; cardiovascular; cytostatic; energineuroprotective; osteopathic; THAP modulator; THAP synthesis modulator;

The present invention describes a method for modulating the expression of a thanaros (death)-associated protein (THAB) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repression the PTHAP responsive gene. Also described: (1) a method of modulating the expression of a gene responsive to a THAP/chemokine complex; (2) a pharmaceutical composition comprising a THAP/chemokine a compising a transcription factor decy described above; (5) methods of modulating the interaction between a nucleic acid and a THAP-family polypeptide or its biological fragment; (3) a renormality of a THAP responsive element; (4) a cell comprising a transcription factor decy described above; (5) methods of modulating the interaction between a nucleic acid and a THAP-family polypeptide or its biological fragment; (3) a vector packaging cell line complex; (5) a vector packaging cell line complex; (6) a vector packaging cell line complex; (7) a method of constructing a cell comprising a viral vector which comprises a promoter operably linked to a nucleic acid encoding a THAP-family polypeptide or its biological fragment; (7) a method of constructing a cell which expresses a recombinant THAP-family polypeptide; (8) methods of instructions associated with a condition mediated by a THAP/chemokine complex; (6) methods of instructions and condition mediated by a THAP/chemokine into the nucleus; (10) methods for reducing the symptoms associated with a condition mediated by a THAP/chemokine or a transcriptional resulting from the associated with ranscriptional resulting from the condition associated with ranscriptional regulated in an individual; or symptoms associated with ranscriptional represses a THAP-family polypeptide in an individual; (11) a vector described above or that expresses a THAP-family polypeptide that does not bind to a chemokine or less than the animance of composition and estectable product; (12) a genetically mediated b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                        Modulating expression of a Thanatos (death)-Associated Protein (THAP) responsive gene for preventing or treating e.g. cancer or inflammation, comprises modulating the interaction of a THAP polypeptide with a nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LKYQFDAFYGERSTQQDIYAGSVQPILRHLLEGQNASVLAYGPTGAGKTHTMLGSPEQPG 145

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176, ABL30511), expressed DNA sequences (ABL16176) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; gastrointestinal; pene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AARISS66 to AARISSOS encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AABSSOS to AABS7302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, candiovascular, renal, and proliferative disorders, wounds, and infectious diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful as a primer for synthesizing the polynucleotide or as a probe for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Otsuki T, Wakamatsu A, Sato H, Ishii S;

detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides are useful as pharmaceutical agents. The present sequence represents a protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         structural and cytoskeleton-associated polypeptide, SCAP, cell proliferative disorder; cancer, atherosclerosis, viral infection, HIV, neurological disorder; Parkinson's disease, Alzheimer's disease;

```

The present sequence represents a structural and cytoskeleton-associated polypeptide (SCAP). The SCAP polypeptides and polymucleotides of the invention are useful for diagnosing, preventing or treating diseases or conditions associated with aberrant expression of SCAP, such as cell proliferative disorders (e.g. cancer or atherosclerosis), viral infections (e.g. HIV) or neurological disorders (e.g. Parkinson's disease, Allakaimer's disease or stroke). These may also be used for assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of SCAP. The SCAP or its fragments are also useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. 70 YGERSTQQDIYAGSVQPILRHLLEGQNASVLAYGPTGAGKTHTMLGSPEQPGVIPRALMD 129 Swarnakar A, Ho A, Hafalia AJA, Emerling BM, Ison CH, Nguyen DB; Chien D, Lu DAM, Yang YG, Yue H, Murage J, Griffin JA, Burrill JD; Wang JT, Marquis JP, Blake JJ, Chawla NK, Lee S, Becha SD, Lee SY; Richardson TW, Bhatia UG, Zheng W, Sprague WW, Tang YT, Azimzai Y; 11 QLMVALRVRPISVABLEEGATLIAHKVDEQMVVLMDPWEDPDDILRAHRSREKSYLFDVA 19 RVRVAVRLRPF--VDGTAGAS-----DPPCVRGMDSCSLEIANWRNHQETLK-YQFDAF Gaps New human structural and cytoskeleton-associated proteins and polynucleotides for diagnosing, preventing or treating diseases associated with aberrant protein expression, e.g. cancer, atherosclerosis, HIV or stroke. 16; 31.6%; Score 559; DB 8; Length 998; 38.9%; Pred. The invention describes an isolated novel human microtubule motor protein (I) is useful for screening modulators of HsKip3d. The method comprises contacting (I) with a candidate agent in a test and control concentration, and assaying for the level of HsKip3d activity, where the HsKip3d activity between the level of HsKip3d activity, and where a change in activity between the test and control concentration indicates a modulator. A composition containing (I) is useful in the treatment of inflammation, cardiac hypertrophy, cellular proliferation diseases e.g. inflammation, cardiac hypertrophy, cellular proliferation diseases e.g. byperplasias, reseneousls, cancer, including solid tumours of skin, bream, lung, heart, bone, genitourinary tract, liver, nervous system, adrenal glands, haematologic, gynaecological and testicular carcinomas, autofimmune disease, arthritis, graft rejection, inflammatory bowel disease, proliferation induced after medical procedures, such as surgery, angioplasty. The motor domains may also be used in nanotechnological applications, and polymuclectides encoding the proteins is further useful for inclusion on GeneChip (RIM) array or for use in entor montor in expression monitoring. This is the amino acid sequence of the novel human motor in monitoring. This is the amino acid sequence of the novel human motor in the method of the

Sequence 5, Application US/09724224
Fatent No. 6387644
GENERAL INFORMATION:
APPLICANT: Beraud, Christophe
TITLE OF INVENTION: No. 638764el motor proteins and methods for TITLE OF INVENTION: their use
CURRENT APPLICATION NUMBER: US/09/724,224
CURRENT FILING DATE: 2000-11-28
FRIOR APPLICATION NUMBER: 09/597,292
FRIOR FILING DATE: 2000-6-20
NUMBER OF SEQ ID NOS: 8
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 5
LENGTH: 1041

Application US/10093317

Patent No. 6762043

GENERAL INFORMATION:

I GENERAL INFORMATION:

I TITLE OF INVENTION: No. 6762043el motor proteins and methods for TITLE OF INVENTION: their use

TITLE OF INVENTION: their use

FILE REFERENCE: 1044

CURRENT APPLICATION NUMBER: US/10/093,317

CURRENT FILING DATE: 2002-03-06

PRIOR FILING DATE: 2002-11-28

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 1464;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
